

ABSTRACT OF THE DISCLOSURE

A soft, chewable lozenge for relief of mouth pain contains, by weight, 10-60% hydrogenated starch hydrolysate, 3-60% hydrogenated mono- and di-saccharides, 1-20% hydrogenated vegetable oil, 0.5-27% gelatin, 0.25-7.5% anesthetic and 1-25% water. A method for treating mouth and throat pain by administering to a patient in need a soft, chewable, non-sticky anesthetic lozenge is disclosed.
